# Fellipe Utaka

fellipeutaka@gmail.com | fellipeutaka.vercel.app | linkedin.com/in/fellipeutaka | github.com/fellipeutaka

## Skills

Java, JavaScript (ES2015+), TypeScript, HTML, Sass, SQL, GraphQL, React, Next.js, Gatsby, Astro, Node.js, Tailwind CSS, Styled Components, Framer Motion, Electron, Jest, Vitest, Cypress, Playwright, Spring Boot, Express, Fastify, Nest.js, React Native, Expo, Git, GitHub, Figma, Netlify, Vercel, Heroku, Storybook, Docker, Webpack, Babel, esbuild, swc, Jira, Trello, Monday, Notion, Slack, Discord

## Experience

**Front-End Developer**, Blue Company                                       Sep 2024 - Current
- Developed and maintained web applications for a health tech company
- Collaborated with product managers and designers to create user-friendly interfaces
- Implemented responsive designs using modern web technologies and frameworks
- Wrote clean, maintainable code and conducted code reviews to ensure high code quality and performance

**Freelance Full-Stack Developer**, Divina Terra Atibaia                     Jun 2024 - Sep 2024
- Built an admin dashboard with React, TypeScript, TailwindCSS, Next.js, and React Aria
- Developed the back-end using Java, Spring Boot, Postgres, Docker, CI/CD, and GitHub Actions
- Delivered a responsive landing page using Astro and TailwindCSS for optimized user experience

**Freelance Full-Stack Developer**, NextBase                                 Jan 2024 - Jun 2024
- Developed a SaaS boilerplate using React, TypeScript, TailwindCSS, Next.js, shadcn/ui, Supabase and MDX
- Created a scalable and reusable architecture to speed up the development of future SaaS products

**Full-Stack Developer**, Anjun Express                                      Apr 2023 - Oct 2023
- Spearheaded the development and maintenance of internal systems to enhance transport and logistics operations within the cross-border market, adhering to best development practices
- Optimized critical resources, resulting in a remarkable 20increase in page loading speed
- Established a comprehensive Design System, ensuring accessibility and reusability of components across various projects, subsequently published in NPM for wider utilization
- Collaborated in English with international teams to integrate front and back-end solutions

## Education

**ETEC Professor Carmine Biagio Tundisi**, Systems Development Technician     Jan 2020 - Dec 2022
- **Coursework:** Data Structure and Algorithms, Systems Programming, Object-Oriented Programming, Functional Programming

## Projects

**Kanpeki**                                                                  git.new/kanpeki

A collection of copy-paste components inspired by shadcn/ui, but enhanced with React from Adobe and Radix UI. Highly customizable, featuring beautiful animations and accessible components designed to integrate seamlessly into modern React projects.

**Satoru**                                                                   git.new/satoru

A desktop application built with Rust, Tauri, React 19, TailwindCSS, shadcn/ui, and Query. It allows users to manage Minecraft servers, monitor server logs, track RAM usage, and access various other management functionalities.
